

NAME: CHETAN SURESH HOLE
Designation: Technical analyst
E-Mail: Chetan.hole@coforge.com
Mobile no: 8928807777
Experience: Experience: 6.1 years
Location: Pune, India

PROFESSIONAL SUMMARY

- ☒ A highly competent GCP professional with around 4.1 years of experience in Cloud and DevOps Engineering with good demonstration knowledge of GCP Administration and DevOps Implementation.
- ☒ Managed on-prem server Linux/Windows servers including installation, configuration.
- ☒ Built CI/CD pipeline for on-prem deployments using Github Actions and Bamboo.
- ☒ Automated the installation of Conda environment using shell scripts to ensure consistent setup on on-prem server.
- ☒ Build Management – Experience in tools such as Jenkins and Maven for build management.
- ☒ Worked cloud GCP services Compute engine, VPC, Cloud Storage, Google cloud logging, IAM, GKE, Artifact registry, Cloud build, Load Balancer.
- ☒ Expertise in writing playbooks and creating Roles for Scalability and Reusability in Ansible.
- ☒ Working on GCP infrastructure service deployment and provisioning.
- ☒ Creating cloud-build pipelines and deploying services on GKE by using helm
- ☒ Configure and maintain GKE clusters and deployments.
- ☒ Working on Kubernetes gateway.
- ☒ Migrated AWS code pipelines to GCP cloud build.
- ☒ Manual Installation of Sitecore on Jenkins server.

- ☑ Following best practice in Source control systems like GitHub/Code commit/Bitbucket to enable DevOps culture.
- ☑ Good Hands-on experience in creating Jenkins jobs, plug-in installations, and setting up distributed builds using master/slave concepts.
- ☑ Hands on experience Docker containers by writing Docker files and multi container architecture by writing docker compose files
- ☑ Responsible to create, maintain and troubleshoot the CI/CD pipelines.
- ☑ Migrated Bamboo Pipelines to GitHub Actions.

TECHNICAL SUMMARY

Domain	Technology
Build tool	Maven
Cloud Platform	GCP
Configuration and Management Tool	Ansible
Database	MySQL
Version Control	Bitbucket, GitHub
Operating Systems	Windows10/11, Linux
Ticketing Tool	Jira
IAC	Terraform
Scripting Language	Python, Bash
Container platform	Docker
Container Orchestration	Kubernetes
Code scanning	Veracode

Roles and Responsibilities	Project 1: Role: Cloud DevOps Environment: GitHub, GitLab, AWS, SonarQube Project Profile: • Created cloud infrastructure using Terraform and Terragrunt by utilizing client-provided code and securely injecting required secrets during deployment. • Created two Docker images based on the Dockerfile provided by the client to support application deployment requirements. • Built two Docker images and successfully pushed them to AWS ECR for deployment. • Created the SonarQube project and integrated it into GitLab CI/CD pipeline to enable automated code analysis and overall code coverage reporting. • Managed and maintained both frontend and backend CI/CD pipelines in GitLab to ensure smooth build, test, and deployment workflows. • Troubleshoot GitLab self-hosted runners, resolved partial health-check failures, and restored runner availability by restarting EC2 instances and validating runner status in GitLab console • Managed User lifecycle on jump box including user creation, password reset, expiration handling and access revocation. Project 2: Role: Cloud DevOps Environment: GitHub, Bitbucket, GitHub Actions, SonarQube, Veracode, Bamboo, Git Project Profile: Migration from Bamboo to GitHub Action. • Responsible for creating, maintaining, and troubleshooting the CI/CD pipelines. • Migrated Bamboo Pipelines to GitHub Actions – streamlining the continuous integration process • Transitioned Bamboo repositories to GitHub repositories, consolidating code management and version control.
-----------------------------------	---

- Developed python script to send Liquibase bulk logs to Google cloud logging, enhancing monitoring and troubleshooting.
- Automated the installation of Conda environment using shell scripts to ensure consistent setup
- Created Python virtual environments to maintain isolated development environments and manage dependencies.
- Basic understanding of Liquibase for effective database schema management.
- Developed and published project documentation on Confluence including migration process and technical procedures to streamline team knowledge sharing and improve accessibility.

Project 3:

Role: Cloud DevOps

Environment: Cloud Build, GKE, Artifact Registry, Helm, Cloud Storage

Project Profile: Application Migration from EKS to GKE

Job Role:

- Migrated deployments and applications from AWS EKS to GCP GKE
- Built Cloud Build triggers for CI/CD pipelines to deploy Python based applications on GKE
- Developed helm templates for deploying resources and services on GKE
- Configured workload identity for GKE workloads to securely fetch secrets from Google Secret Manager.
- Setup ingress for host and path-based routing
- Collaborated with testing and deployment teams to fix detections and maintain stable environments in production and non-production environments.
- Attended daily scrum calls with customers to provide status updates on the implementation progress.

Project 4:

Role: Cloud DevOps

Environment: Datadog, Kong API, Istio, Mamba

Project Profile: Onboarded task for Istio, Kong API etc

Job Role:

	• Configured and Managed API traffic routing using Istio, implementing routing rules between microservices. • Integrating Kong API Gateway to expose microservices securely and manage traffic policies like rate limiting and authentication. • Used Datadog for application monitoring, setting up custom dashboards, alerts, etc. • Used Mamba as a templating tool. Project 5: Role: Cloud DevOps Environment: Jenkins, Artifact Registry, Cloud storage, helm, GKE, Docker, GitHub, SonarQube Project Profile: • Managed deployments on Google Kubernetes Engine using helm charts, handling multiple microservices with environment specific configurations. • Build CI/CD pipelines in Jenkins to automate the Build, test, and deployment process using shared libraries. • Containerized applications using docker, Docker file stores in GitHub and integrated into Jenkins pipelines for automated image builds. • Infrastructure provisioning of Application resources using Terraform as per SDLC Environment.

CERTIFICATIONS

- ☒ Google Associate Cloud Engineer
- ☒ Google Professional Cloud Architect

PROFESSIONAL AWARDS / ACHIEVEMENT

☒ Persistent Bravo Awards

EDUCATIONAL QUALIFICATIONS

☒ Post-Graduation in MSC computer science from Pune University – 2015

☒ Graduation in BSC computer science from Pune University – 2013

☒ HSC from Maharashtra State Board - 2009
